Liquid Bridge Plug HTA[®] is a high temperature activator for **Liquid Bridge Plug[®]**. It consists of a aromatic amine resin curing agent for fabricating non-shrinking composite plugs at elevated temperatures. **Liquid Bridge Plug HTA[®]** does not contain methylene dianiline (MDA). Low viscosity and very long working life at bottom hole temperatures make this product very versatile and easy to process.

Benefits:

- Low room temperature viscosity
- Long working life
- Very low moisture absorption
- Good epoxy performance characteristics
- Non-MDA aromatic amine
- High elongation
